1. Description

1.1. General description

[Mootools Enabler/Disabler](#) is a [Joomla!](#) plugin for Joomla! 2.5.x and Joomla! 3.0.x that allows the site administrator to decide how and when load [Mootools](#) in website.

In Joomla! 2.5.x Mootools is always loaded in Joomla! You cannot disable it.

In Joomla! 3.0.x Mootools is only loaded when extensions need it but you may still need help to disable it directly from the backend.

1.2. Features

- Save up to 500KB in page load.
- Avoid jQuery conflicts.
- Select the default Mootools mode between enabled or disabled.
- Enable or disable Mootools per menu entry.
- You can manually add extra scripts to disable.
- Nulls all the `window.addEvent` calls and removes all the Jcaption calls to ensure that you have no dependency errors.
- Autoenable mootools in frontend for content editing.
- Autoenable mootools per component (thanks to [Hans Kuijpers](#)).

1.3. Author & License

This plugin was originally developed by **Roberto Segura López** ([@phproberto](#)) and is owned and maintained by **Digital Disseny** (<http://digitaldisseny.com>).

Is licensed under the GNU General Public License, version 2 (**GNU / GPL2**).

License details: <http://www.gnu.org/licenses/gpl-2.0.html>

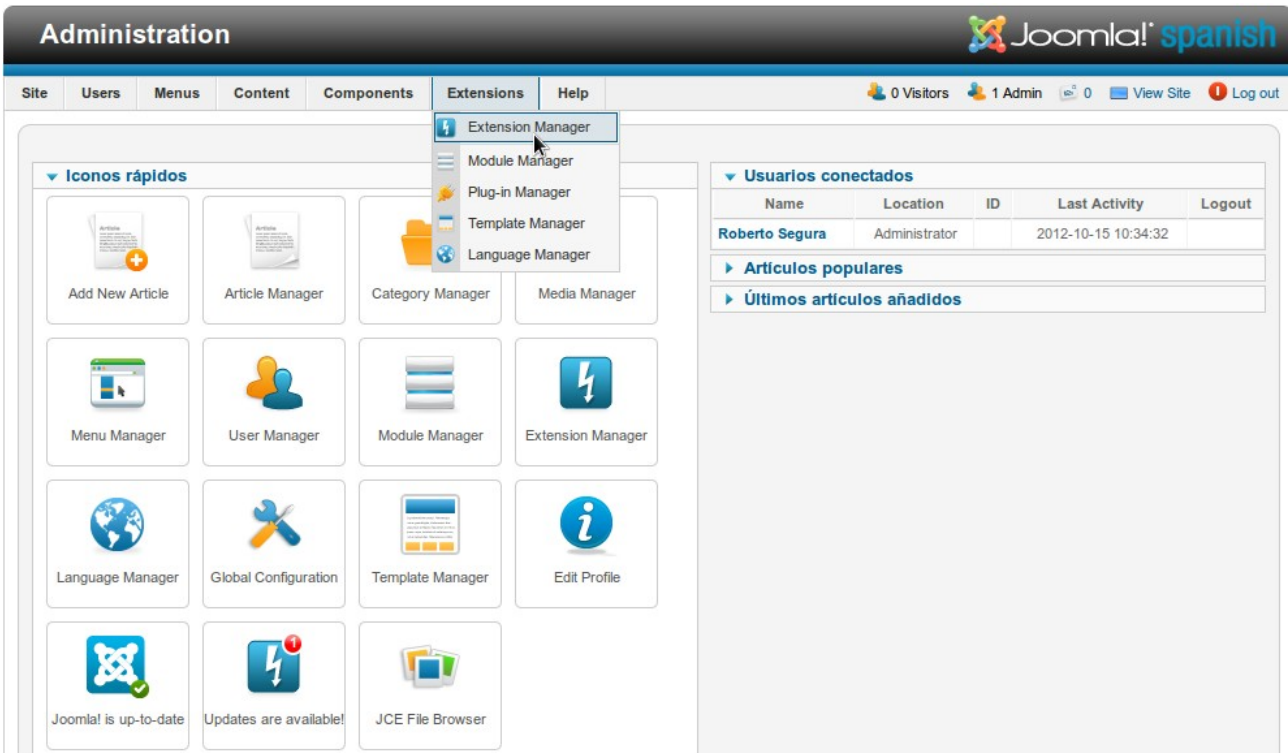

1.4. Requirements

- Joomla! 2.5.x or Joomla! 3.0.x site running and able to install extensions.

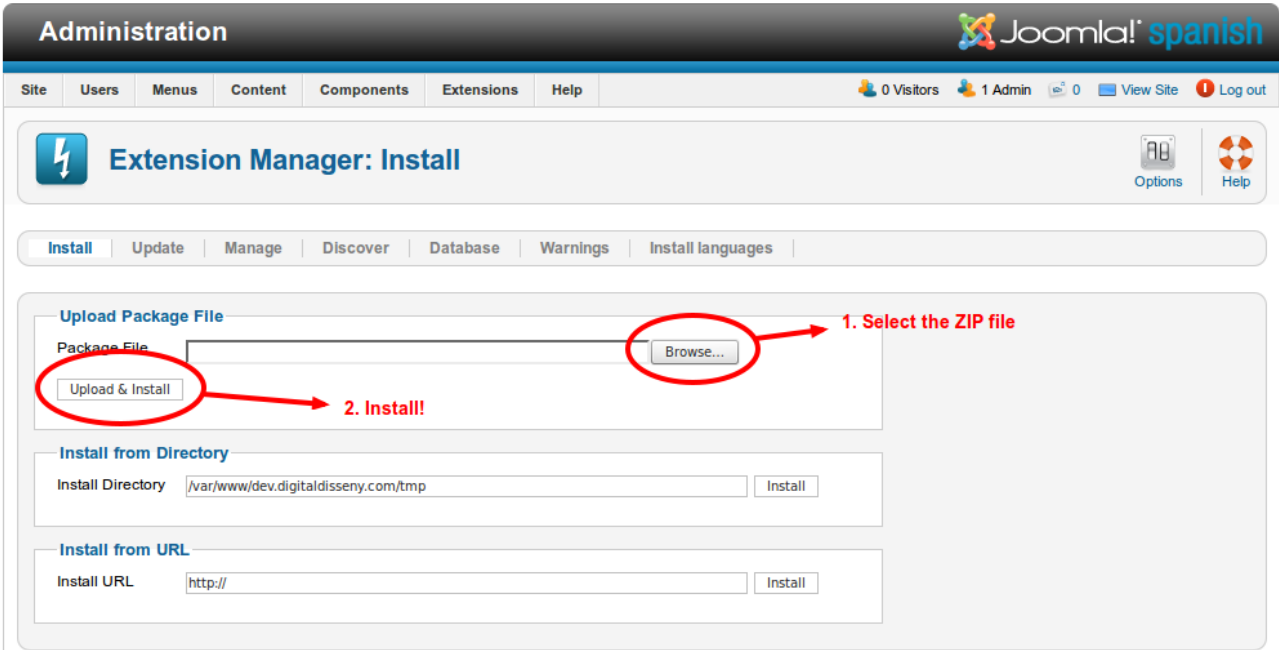

2. Install & configuration

2.1. Install

[Download the ZIP file](#) and install it as any other Joomla! Extensions through the Joomla! Extension Manager.

The screenshot shows the Joomla! Administration interface in Spanish. The top navigation bar includes 'Administration' and the Joomla! logo with 'spanish'. Below the navigation bar, there are tabs for 'Site', 'Users', 'Menus', 'Content', 'Components', 'Extensions', and 'Help'. The 'Extensions' tab is selected, and a dropdown menu is open, showing options: 'Extension Manager', 'Module Manager', 'Plug-in Manager', 'Template Manager', and 'Language Manager'. The main content area is divided into two columns. The left column, titled 'Iconos rápidos', contains a grid of quick access icons: 'Add New Article', 'Article Manager', 'Category Manager', 'Media Manager', 'Menu Manager', 'User Manager', 'Module Manager', 'Extension Manager', 'Language Manager', 'Global Configuration', 'Template Manager', 'Edit Profile', 'Joomla! is up-to-date', 'Updates are available!', and 'JCE File Browser'. The right column, titled 'Usuarios conectados', contains a table with columns 'Name', 'Location', 'ID', 'Last Activity', and 'Logout'. The table shows one user: 'Roberto Segura' (Administrator) with a last activity of '2012-10-15 10:34:32'. Below the table are links for 'Artículos populares' and 'Últimos artículos añadidos'.

2.2. Configuration

After installing the plugin you have to enable and configure it.

1. Go to: **Extensions** → **Plug-in Manager**.
2. Search for a plugin called **System - Mootools Enabler/Disabler**.
3. Click on the name of the plugin to edit.

Now set the plugin status as Enabled and adjust the plugin settings to your needs.

The screenshot shows the Joomla! Administration interface for the Mootools Enabler/Disabler plugin. The 'Status' dropdown menu is set to 'Enabled' and is circled in red. A red arrow points to this dropdown with the text 'Enable the plugin'. Another red arrow points to the 'Basic Options' section with the text 'Plugin settings'. The 'Basic Options' section is highlighted with a red box and contains the following settings:

- Default mode:** Enable Mootools only for specified items
- Additional scripts:** (Empty text area)
- Autoenabled components:** (Empty text area)
- Automatically enable Mootools when editing content:** No Yes

2.3. Plugin Options

2.3.1. Default Mode

Select the default mode to load Mootools. You can choose between:

- **Disable Mootools only for specified items.** Enabled by default
- **Enable Mootools only for specified items.** Disabled by default.

2.3.2. Additional Scripts

Additional Scripts that you want to disable with Mootools. Usually that use Mootools and you want to avoid the to load. Insert full URLs comma separated.

2.3.3. Autoenabled Components

Here you can add components comma separated that always require Mootools enabled. When the system detects one of this components, Mootools will be loaded. The format is the URL option (i.e. To always enable Mootools for content `com_content`).

2.3.4. Autoenable for content editing (default enabled)

Usually frontend article edition requires Mootools enabled. When selected, this option will detect article edition and load Mootools.

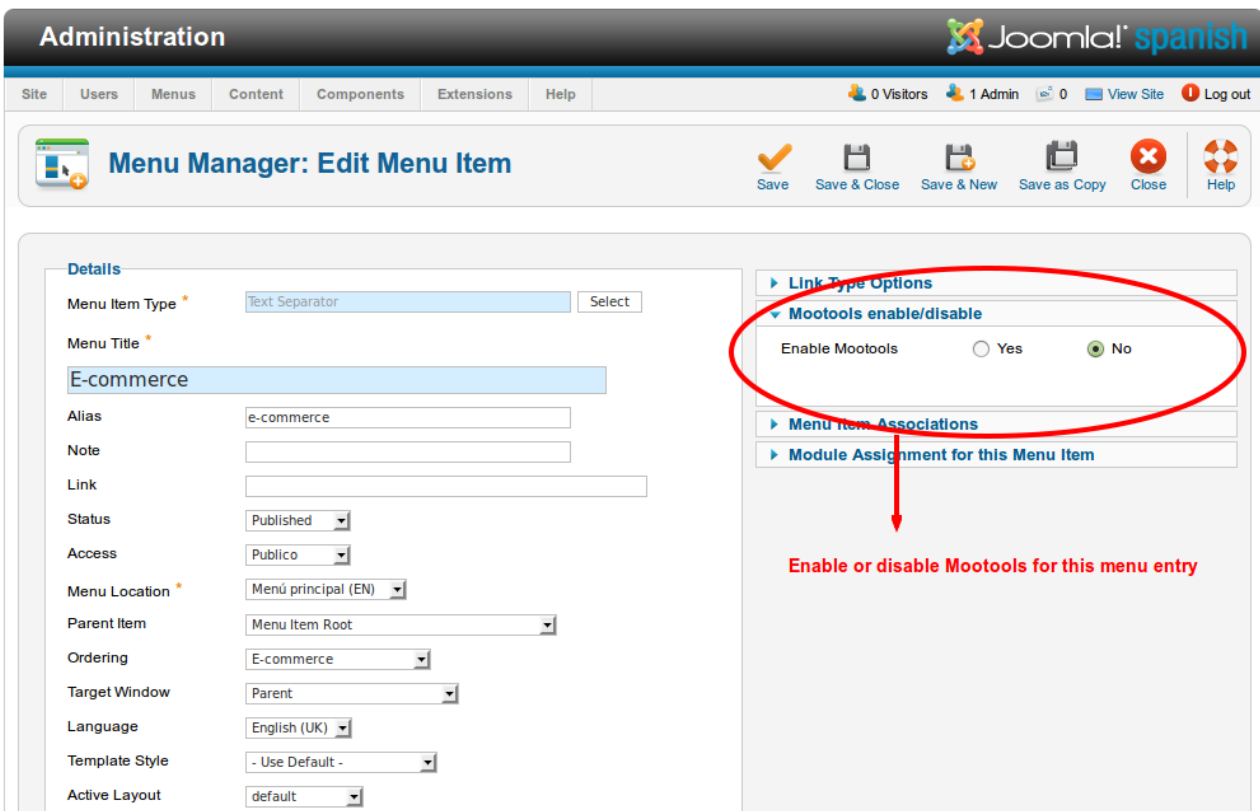

2.3.5. Autoenable for com_users (default enabled)

Most Frontend user actions like login or profile edition require Mootools enabled. If you enable this setting the plugin will detect com_users actions and load Mootools.

2.4. Activation per menu item

One of the cool features of the plugin is that you can enable or disable Mootools per menu item. You can have Mootools fully disabled on your site except for one menu item that requires it.

To use this feature just edit any menu item and look for a panel called **Mootools enable/disable**. Inside, select the desired Mootools behaviour.

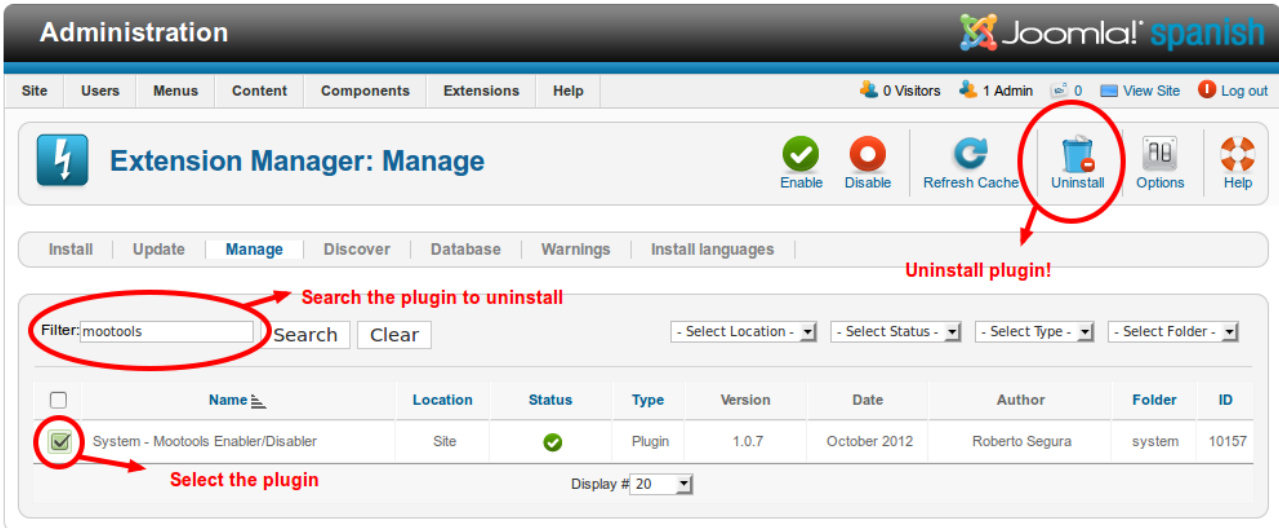

The screenshot shows the Joomla! Administration interface for editing a menu item. The page title is "Menu Manager: Edit Menu Item". The "Details" section includes fields for Menu Item Type (Text Separator), Menu Title (E-commerce), Alias (e-commerce), Note, Link, Status (Published), Access (Publico), Menu Location (Menú principal (EN)), Parent Item (Menu Item Root), Ordering (E-commerce), Target Window (Parent), Language (English (UK)), Template Style (- Use Default -), and Active Layout (default). On the right side, the "Link Type Options" section is expanded, showing the "Mootools enable/disable" section. This section has two radio buttons: "Yes" (unselected) and "No" (selected). A red circle highlights this section, and a red arrow points to the "No" radio button. Below the circle, a red text label reads "Enable or disable Mootools for this menu entry".

3. Uninstall

To uninstall the extension:

1. Go to **Extensions** → **Extension Manager** → **Manage**.

2. Filter by the extension name. For example: `Mootools` and click `Search`.
3. Select the plugin and click `Uninstall`.
